

StudyMate defense run of show

Open the presentation, native Figma prototype, ERD and GitHub before the defense. Keep the five speakers in this order.

Segment	Presenter	Time
Concept and SRS	Arlan	0:00-3:20
Acceptance criteria and NFR	Agabek	3:20-4:20
Interface and live Figma	Bakdaulet	4:20-7:00
ERD, 3NF and matching	Yelnar	7:00-10:30
Live GitHub/Trello and plan	Alisher	10:30-12:00
Questions	All five	12:00-15:00

Live demonstration sequence

Bakdaulet: Browse → Group details → Application → Pending → Organizer list → Review → Accept → Accepted. Reset to Pending, then show Reject → Rejected if time allows.

Yelnar: Open ERD_Core.svg or the Core data page in draw.io. Explain users to study_groups, then study_groups to join_requests. Open the Optional profile page only for a profile question.

Alisher: Show the repository, commit history, actual PR list and canonical Trello board. Mention only evidence that exists at presentation time.

Fallback and timing

The local HTML is for rehearsal and backup. It does not replace the native Figma requirement. Keep the rendered ERD and notes available offline. If a question takes too long, the relevant speaker gives the short answer and offers to open the detailed diagram.

Before Moodle submission

Use the PDF named with all five surnames. It must contain the repository URL, a real viewable Figma prototype URL, and the actual ERD path in /docs. Do not submit the draft while the Figma URL is missing.
